DETAILED ACTION

1. Claims 1-13 are in the application.

Drawings

2. The drawings are objected to because the use of shading in some of the figures makes the details difficult to see. See 37 CFR 1.84. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Objections

3. Claim 13 is objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim should refer to other claims in the alternative only. See MPEP § 608.01(n). Accordingly, the claim has not been further treated on the merits.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Winsel in view of Lagerwey and Hancock et al.

Winsel discloses a method of generating gasses contained in an electrolyte solution by providing a wind turbine 25; generating electricity by an electrical generator 26 connected to the wind turbine and extracting the gases from the electrolyte by means of electrolysis using the electricity from the generators. Although Winsel does not specify the nature of the electrolyte, the byproducts are disclosed as being hydrogen and oxygen. Hancock et al teaches the use of salt water solution for the same purpose. Lagerwey teaches the use of wind turbines mounted on floating platforms for generating electricity. In view of these disclosures, it would have been obvious to one skilled in the art to use in the system of Winsel a salt solution as the electrolyte

generally as taught by Hancock et al and to locate the wind turbine on a floating platform, generally as taught by Lagerwey. The use of a salt solution as the electrolyte would have been a matter of choice to one skilled in the art. Locating the wind turbine on a floating platform would have been desirable as it would provide a source of wind not interfered by land masses or land obstructions such as trees. Claim 2 does not include any method steps.

Allowable Subject Matter

6. Claims 4-12 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
